ATTA MUHAMMAD MAZHAR

Electrical Engineering Student | UET Lahore

0309-2050550 attamuhammadmazhar@gmail.com github.com/Atta-Muhammad-Mazhar Lahore, Pakistan

PROFESSIONAL SUMMARY

Motivated Electrical Engineering student at UET Lahore (Main Campus) with a strong foundation in circuit design, embedded systems, and programming. Certified in Python Programming through the Government of Pakistan's Honhar Jawan Program. Skilled in multiple programming languages and EDA tools, with hands-on experience in hardware description languages and simulation software. Eager to contribute technical skills to a forward-thinking engineering team and grow through real-world industry exposure.

EDUCATION

Bachelor of Science in Electrical Engineering *Sep 2024 – Sep 2028 (Expected)*

University of Engineering & Technology (UET) Lahore — Main Campus CGPA: 2.8 / 4.0

- Relevant Coursework: Circuit Analysis, Digital Logic Design, Signals & Systems, Electromagnetics, Linear Algebra, Programming Fundamentals
- Proficient in SystemVerilog HDL for digital circuit design and simulation
- Experienced with LTspice for analog and mixed-signal circuit simulation

TECHNICAL SKILLS

Programming Languages: Python | C | C# | SystemVerilog

EDA & Simulation Tools: LTspice | (exposure to Multisim / circuit simulators)

Game Development: Unity (2D/3D) | C# scripting

Developer Tools: Git | GitHub | VS Code

Soft Skills: Analytical Thinking | Problem Solving | Team Collaboration | Fast Learner

CERTIFICATIONS

Python Programming Certificate — Honahar Jawan Program *Government of Pakistan Initiative*

Completed a structured Python programming course under the national youth skills initiative, covering core programming concepts, data structures, and problem-solving techniques using Python.

ACADEMIC PROJECTS & SELF-INITIATED WORK

Circuit Simulation Studies — LTspice *UET Coursework*

- Designed and simulated analog circuits including RC filters, op-amp configurations, and power supply topologies using LTspice
- Analyzed transient, AC, and DC operating points to validate theoretical calculations

Digital Logic Design — SystemVerilog HDL *UET Coursework*

- Implemented combi-national and sequential circuits (multiplexers, flip-flops, FSMs) using SystemVerilog at the register-transfer level
- Performed functional simulation and timing analysis to verify design correctness

Python Scripting & Automation Projects *Self-Initiated*

- Developed Python scripts for data processing and automation as part of the Honhar Jawan certification curriculum
- Applied object-oriented programming principles and worked with standard libraries

Game Prototype — Unity / C# *Self-Initiated*

- Built a functional 2D game prototype using Unity, implementing player controls, collision physics, and basic game-loop logic in C#
- Demonstrated ability to learn new frameworks independently through the Honhar Jawan game development track

ADDITIONAL INFORMATION

- Languages: English (Professional) | Urdu (Native)
- Open to internship opportunities in Power Systems, Embedded Systems, Electronics, Telecommunications, or related EE domains
- Actively expanding knowledge in embedded C programming and micro-controller-based systems
